

If you haven't seen Carlson 2009... You haven't seen Carlson.

Carlson 2009 can now stand alone... without AutoCAD!

But don't worry, you'll recognize everything but the price tag

Work with AutoCAD-based products OR without - your choice!

- Install on top of any AutoCAD-based program, version 2000-2009 including AutoCAD Map®, Land Desktop® or AutoCAD Civil 3D®

OR

- Install a stand-alone copy of Carlson Civil Suite using the newly integrated IntelliCAD (ICAD) engine. ICAD looks and acts like AutoCAD and produces DWG files that are fully-functional and transferable to other AutoCAD programs.

OR

- Install both - see the difference (or, more likely, the similarities) when side-by-side. An ICAD version is included with every purchase.

Avoid forced upgrades

- Not ready to upgrade? No problem. There is no product retirement so you receive service and support for all released products
- Ready to upgrade? Get the latest updates for Carlson Survey, Civil, Hydro or GIS for \$395 or less – regardless of the version you are moving from.

FREE technical support directly from Carlson's support and product development staff

- This is how Carlson Software guarantees the software "...Works Simply... and Simply Works"
- Trial version? Current release? Old release? Same level of service and support via phone, email or website knowledge base

LotNet - Available in Carlson Survey & Civil packages

Lay out and label a network of roads and lots, using frontage, setbacks, good/poor soil areas and typical building footprint parameters, that truly interact with each other!

Visit www.thatcadgirl.com for a 5 minute video

RoadNet - Available in Carlson Civil package

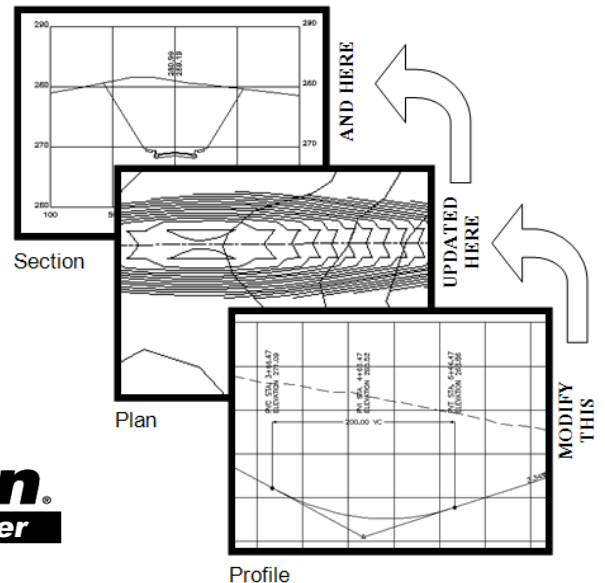

Grade a network of roads & lots - including intersections, cul-de-sacs and roundabouts - easily and in a matter of minutes! Change one road and other affected roads will update as well.

Visit www.thatcadgirl.com for a 5 minute video

HydroNet - Available in Carlson Hydrology package

Use your actual surface model to track runoff and analyze an entire watershed or just a specific area above a catch basin. You can also design ponds, culverts, channels and single or multiple outlets. HydroNet has robust calculation and reporting capabilities such as hydraulic and energy grade lines, inlet flows, gutter spread, flow/cover/velocity/collision checks and more. Sewer pipes can then be drawn and updated dynamically in plans, profiles and 3D views.

Carlson Survey 2009	\$ 1,500	Carlson Civil Suite 2009 (Survey, Civil, Hydrology & GIS)
Carlson Civil 2009	\$ 1,500	
Carlson Hydrology 2009	\$ 1,000	
Carlson GIS 2009	\$ 1,000	
		\$ 3,500
A stand-alone IntelliCAD version is included in all packages
